

NOTICE OF PUBLIC HEARINGS – XCEL ENERGY AVERY SUBSTATION

The new Avery Substation will add capacity to deliver reliable, safe electric power to a fast-growing area of Northern Colorado. Proactive planning for current and future growth will help reduce the risk of electric outages while meeting energy needs for years to come. The new substation will help improve grid reliability in Windsor, Severance and Timnath, as our existing substations approach capacity.

Xcel Energy has filed a Conditional Use Grant permit application with the Town of Windsor, and two public hearings have been scheduled. The Windsor Planning Commission will hold a public hearing Wednesday, October 16, and the Windsor Town Board will hold a public hearing Monday, October 28. Both hearings will begin at 7 p.m.

**Location: Windsor Town Hall
Board Room, third floor (enter through the south doors)
301 Walnut St., Windsor**

Hearing dates are subject to change. Check for updates by visiting windsorgov.com, xcelenergy.com/Avery or contacting us at info@xcelenergyaverysubstation.com or **833.539.0506**.

About the Project

Xcel Energy proposes to build the Avery Substation and 0.4 miles of new transmission line east of Timnath Reservoir, within Windsor town limits. It will interconnect with existing transmission lines, strengthen grid reliability and resiliency, and deliver the reliable service you expect. We chose the location, shown on the back of this card, because it offers a wide range of benefits and is preferred based on recent public feedback.
